

Javascript Coding Challenge

Requirements

Write a function that accepts a string and returns the number of words in that given string. Also, make your function resilient (i.e., handling different inputs).

Write your solution without using any libraries and use ES6 or above as much as possible.

```
1. function countWords(sentence) {}  
2.  
3. let sentence = 'A quick brown fox jumps over the lazy dog';  
4. countWords(sentence); // Output: 9
```

Submission

- Upload your source code to Github/Gitlab and make sure it will be accessible.
- Send the Github/Gitlab link to aristotle.espiritu@moscord.com and samuel.francisco@moscord.com
